Patent No. US20020110810A1
GENERAL INFORMATION:
PAPPLICANT: Shuber, Anthony
TITLE OF INVENTION: Methods for Detecting,
FILE REPRENCE: EXT-048
CURRENT APPLICATION NUMBER: US/09/755,004
CURRENT FILING DATE: 2001-01-05
NUMBER OF SEQ ID NOS: 11
SOFTWARE: Patentin version 3.0
LENGTH: 20
LENGTH: 20
TYPE: DNA
ORGANISM: Artificial sequence
                      TOPOLOGY: linear
SEQUENCE DESCRIPTION: SEQ ID NO: 6:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ; FEATURE:

Publication No. US20030170891A1

GENERAL INFORMATION:

APPLICANT: Ribozyme Pharmaccuticals, Inc.

TITLE OF INVENTION: Gene Expression using Short Interfering RNA

FILE REFERENCE: 900/042 (MBHB02-468-A)

CURRENT APPLICATION NUMBER: US 60/393,924

PRIOR FILING DATE: 2002-00-03

PRIOR FILING DATE: 2002-06-06

PRIOR PILING DATE: 2002-06-06

GURREAL INFORMATION:
APPLICANT: Sirna Therapeutics, Inc.
APPLICANT: Meswiggen, James
APPLICANT: Beigelman, Leonid
APPLICANT: Beavo, Pamela
TTILE OF INVENTION: RNA Interference Mediated Inhibition of Vascular Endothelial
TTILE OF INVENTION: Growth Factor and Vascular Endothelial
TTILE OF INVENTION: Gene Expression Using Short Interfering Nucleic Acid (siNA)
TITLE OF INVENTION WINDER: US/10/665,951
CURRENT APPLICATION NUMBER: US/10/665,951
CURRENT FILING DATE: 2003-09-18
PRIOR PLING DATE: 2003-09-18
PRIOR FILING DATE: 2003-07-29

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 243, Application US/09216393

Sequence 243, Application US/09216393

Patent No. US20010014447A1

GRNERAL INFORMATION:

APPLICANT: Wilhausen, Michael James

TITLE OF INVENTION: TOXOPLASMA GONDII PROTEINS, NUCLEIC ACID MOLECULES, AND

TITLE OF INVENTION: USES THEREOF

TITLE OF INVENTION: USES THEREOF

CURRENT APPLICATION NUMBER: US/09/216,393

CURRENT PILING DATE: 1998-12-18

EARLIER PILING DATE: 1997-12-19

NUMBER OF SEQ ID NOS: 364

SEQ ID NO 243

LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ; OTHER INFORMATION: Description of Artificial Sequence: sinA antisense region US-10-683-990-119
